Vapolution 2.0 Quick Start Guide

Get Vaporizing in 5 Minutes!

1. Home Power Supply, Car Adapter, Li-Ion Battery Pack, Illuminated Switch

Plug in the vaporizer and turn on the illuminated switch. The vaporizer will be ready to use in five minutes.

2. Medical Tubing, Retaining Washer, Glass Dimple / Glass Screen, Straight Glass Bowl, Herb, 2.75 inches

Connect the tubing to the glass bowl and place the washer as shown. Load the bowl. Herb grinding is unnecessary.

3.

Pre-heat the vaporizer for five minutes before use. Place the bowl in the vaporizer and count to five. Take a slow and steady draw from the tubing. Repeat until the herbs are brown.

4.

It is time to eject the herb when it turns brown and the flavor has a toasty taste. Eject the herb by blowing through the tubing.

Vapolution Vaporizer 2.0 Instructions

DISCLAIMER: BY USING YOUR VAPOLUTION VAPORIZER, YOU AGREE TO THE FOLLOWING:

1. The Vapolution Vaporizer is for legal use only.
2. DO NOT operate a motor vehicle while using the Vapolution Vaporizer.

The power jack on the back of the vaporizer will accept the Vapolution power supply, car adapter, or the optional battery pack. Plug in the vaporizer. Flip the switch up to turn the vaporizer on. The switch will light up when the vaporizer is on. The Vapolution Vaporizer is designed to run for up to 8 hours continuously without overheating.

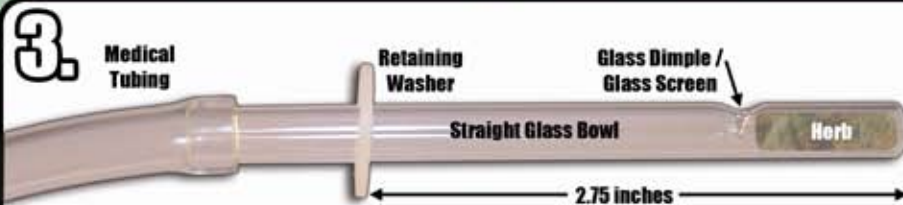

10 to 2 O'Clock on the dial is the vaporizing range. Below 10 is too cool to vaporize and above 2 is too hot to vaporize. A quick start-up can be achieved by turning the vaporizer on high. After five minutes of pre-heating, turn the vaporizer down to your preferred setting. 12 O'Clock is the most common setting for vaporizing.

Place the loaded bowl into the top of the pre-heated vaporizer. Some users like to count to five before they begin to inhale vapor through the tubing. A slow and steady draw will extract the best vapor. Draw until you are out of breath. Hold it in and then exhale. You will see visible vapor. You can repeat this process three to seven times depending on the quality of your herbs and your temperature setting.

The plant material will turn golden to dark brown once it has been vaporized. The taste will also change from sweet and good to a bitter flavor that most describe as tasting like burnt popcorn. Vaporizing the same herb for too long, or on a setting above 2 O'Clock, will turn the vapor pellet black and can cause the VAPOR CHOKE. Stay in the safe zone (10 O'Clock to 2 O'Clock on the dial) until you are intimate with your Vapolution Vaporizer.

All Vapolution bowls are dimpled about one inch from the end. The dimple acts like a screen. The end closest to the dimple is where you load your herbs. Insert the tubing on to the non-dimpled end. If inserting the bowl into the tubing is difficult, boil some water and submerge one end of the tubing into boiling water for 3-5 seconds. The bowl will slip into the softened tubing with ease. Place the retaining washer over the Straight Bowl as shown. The washer should be 2.75 inches from the end of the Straight Bowl. Use the image above to place your washer. The image is to scale. The retaining washers are only required on the Straight Bowls. The retaining washers are NOT required on All-In-Wonder Bowls and Buddy Bowls. The bend in the glass sets the depth for these bowls. Loading the bowl correctly is the most important step. DO NOT grind your herbs. Break off 1-3 small plant pods. Give the plant pods a squeeze and roll them in between your fingers. Make the plant pods into a vapor pellet. Gently slide the formed pellet into the bowl. If you have to force it, the pellet is too big. Good airflow is important. If you load it too tight, you will get no vapor. If you load it too loose, it will fall out. Loading the bowl takes a little practice.

The vaporized herb can be ejected from the bowl by blowing through the tubing. Place the end of the bowl into a jar or bottle and give a sharp blow through the tubing. The vaporized piece of herb will shoot out. Wait 30 - 60 seconds for the bowl to cool. After the bowl has cooled, you can load it up and vaporize again.

Cleaning

Bowls: Submerge the bowls in rubbing alcohol for 8-12 hours. Rinse with warm water. Repeat as necessary. Allow to dry before use.

Heater: Turn off the vaporizer and allow it to cool for at least 30 minutes. Dip a Q-tip in rubbing alcohol and swab out the heater receptacle. Repeat as necessary. Use a dry Q-tip to swab out any remaining alcohol residue. Allow the heater chamber to dry before turning the vaporizer on.

Warnings

- Never force a bowl into the vaporizer. Never press down on the bowl while vaporizing. This could break the glass heater.
- Remove the bowl from the vaporizer when it is not in use.
- DO NOT leave the vaporizer on unattended.
- All bowls will be too hot to touch after they are removed from the vaporizer. Let them cool for at least 30 seconds before re-loading.
